

NEVER THIRST AGAIN JOHN 4:14

The Water & Sanitation Crisis in Uganda

Access to safe water supplies throughout Uganda is 65%. Although the number of people with access to safe water and sanitation has improved over the past 10 years, there are still many communities (both rural and urban) that rely on contaminated water sources such as streams and open wells. More than half of all residents in Uganda do not have access to improved sanitation, sharing overcrowded pit latrines or practicing open defecation.

A greater problem than war in this region is the lack of safe drinking water. As a result, residents collect water from alternate contaminated sources. Diseases from unsafe water and the lack of basic sanitation kill more people every year than all forms of violence. Children are especially vulnerable as their bodies aren't strong enough to fight diarrhea, dysentery, cholera and other illnesses.

With water, it becomes possible to impact other aspects of community life including education, healthcare, income generation and women's empowerment. With water, development happens. **Water is life.**

Current source of Water.

Walking miles to get Water.

With your help, we can make a difference Water is Life.

TALOF Uganda will begin **Never Thirst Again Project**. We are raising funds to complete construction on our current water well and begin construction on two more wells in the neighboring towns. The community is in need of clean water and the Lord has put it on my heart to complete this in the coming months before the rainfall season begins in April. With your support, we can make a major difference in the lives of these people to help them provide for their own needs. Disease and death should not be a way of life for anybody.
